Current, under construction

PROJECT DESCRIPTION

The project comprises upgrading of an existing Secondary school, in the Sekhukhune District in Limpopo. The project entails construction of new six 3 classroom blocks, enviroloo toilet blocks, administration block, multi-purpose hall, science and computer laboratories, fencing, civil services (water supply and reticulation, sewerage reticulation with septic tank and soak-away, access road and storm-water, as well as foundations). Our role included planning, design and construction supervision of civil & structural works.

Substructure:

Conducted geotechnical investigation, construction of platforms, reinforced strip foundations and concrete floor slabs

Superstructure :

The structures are traditional buildings clad with face brick walls, timber roofs covered with chromadek roof sheeting.

Storm water is catered for by concrete aprons, underground pipes, concrete and stone pitched open drains.
